

Point of Sale

Leverage cloud-native point of sale to create relevance at every touchpoint

The Power to Punctuate a Positive Customer Experience

To deliver “the anytime, anywhere” shopping experience that customers expect, retailers can't afford to falter when completing purchases at checkout. Limitations from legacy, siloed, homegrown, or outgrown store solutions can derail a personalized customer experience and sacrifice precious loyalty. OneView's point of sale unlocks the freedom to quickly implement and scale modern point of sale experiences that combine comprehensive point-of-sale functions with feature-rich cross channel engagement that easily transcends the constraints of existing in-store systems.

Modern Point-of-Sale Functionality

OneView Unified Commerce abstracts basket creation, calculation and checkout functions from siloed, disparate store and commerce systems empowering retailers to implement and scale self, mobile, traditional, and automated checkout solutions.

- Create relevance at every touchpoint with a cloud-native transaction engine to combine comprehensive point-of-sale (POS) functions with feature-rich digital experiences for pickups, customer apps, delivery and more
- Serve customers in traditional lanes, mobile line busting, at the curb or doorstep
- Streamline customer engagement across the journey including scan & go, pickups, social and more.
